

## **Murray State College Veterinary Nursing Program- Distance Learning Fast Track Laboratory Option**

---

### **What is the Fast Track Lab option?**

We know it may be difficult finding a facility with some species of animal. Therefore, students who are in applicable classes have the option to complete required clinical tasks that pertain to Bovine & Small Ruminant, Equine, and Exotic & Laboratory species at a Fast Track Lab as opposed to finding their own OCCI site.

### **Where is the Fast Track Lab?**

Murray State College

Veterinary Nursing Program (AVMA accredited Veterinary Technology Program)

Tishomingo, OK

### **How long does it take to complete a Fast Track Lab?**

The Fast Track Labs are designed to be completed in about 3 days. During this time students experience hands-on training in order to complete their required skills.

### **Why Choose Fast Track Labs?**

Many students choose these labs as they are more convenient. Everything they will need for to complete Bovine, Small Ruminant, Equine, Exotic, and Laboratory animal clinical skills will be in one unified location. Additionally, students who participate in these labs do not have to record and submit video proof of completing required tasks! An instructor will be present to check off on essentials tasks and skills. The student will be responsible for travel and boarding expenses.
